Material

PVC

Colour

Grey

A consistently high quality PVC support tray to:

- Prevent roof underlay draping into the gutter
- Prevent exposure of underlay and consequential UV degradation
- Prevent ponding behind fascia's and rotting of roof underlay Easy-Tray's are ideal for use in both new build and re-roofing applications. Manufactured from high grade PVC they are durable and quick and simple to install.

Installation

The felt support tray should be positioned on top of the fascia board and fixed into place with nails. Adjacent trays should overlap by a minimum of 150mm to form a continuous run and adequately support roofing underlay. The felt support tray should be fitted on top of the over fascia vent. Roofing underlay should be laid tightly to ensure that there are no troughs for water to sit. The bottom edge should be higher than the line of the fascia board so as to avoid exposure to the elements and consequential degradation.
